

APPLICATION

The stopfor™ KS 100kg is a sliding new generation fall arrester. It can be used with 11 mm diameter braided rope. The stopfor™ KS 100kg is a new fall arrest concept. Unlike fall arresters implementing a jaw as locking system, the stopfor™ KS 100kg eliminates the risk of mechanical blocking. Blocking is ensured by the body when an abrupt change of position occurs. For this reason, the unit is more ergonomic and compact than its competitors and slides easier on the rope with no excessive locking. The unit can be opened to allow the user to perform maintenance on the product with no need to disassemble. The stopfor™ KS 100kg is equipped with an anti-reversibility system.

DESCRIPTION

The stopfor™ KS 100kg fall arrester is made of aluminum.

This light weight, robust, ergonomic and compact device connects to all the fall arrest anchoring points on the harness. It can be connected to the latter using a type M10 connector. The rope is easy and fast to set up. To do so, the user removes the connector, swivels the two side plates and positions the rope. To close the unit, the user simply pivots the two side plates in the opposite direction and reinstalls the connector which acts as a safety lock.

The stopfor™ KS 100kg is equipped with an anti-reversibility system
